

ZOO Party 2024 – GFX Compo

"Jazzoo" by Mikael / Pretzel Logic

jazzoo-screenshot.png

Background

I often portrait animals in my pictures – they are fun and makes you explore different ideas and a universe of their own. The frog has been with me since the compopic at the Light + Phenomena Easter Party 1992 in Sweden, and has appeared a few times since.

I'm also a fan of jazz and one of my favourite artists today is Johnny "JSPHYNX" Woodham. He's got a great style and performance so I used a picture of him for a reference and created a couple of furry friends for him to play with! The goal was to create a positive vibe for my jazzy picture for the 2024 edition of Zoo.

The execution

Hand pixeled throughout the whole process, using Multipaint by Dr. TerrorZ. Since the program only has a fixed workspace for a regular C64 screen and I wanted to extend the picture into the sideborders, I decided to finalize "Jazzoo" by using Albert Pixels by TCE and The Sarge. I had no coders at hand this time due to demo production for Zoo 😊

Files and folders

- Workfiles from the first to the last #76 are found in the Workfiles folder.
- The reference pic is found in the Info folder.
- The executable .prg and 384x272 screenshot .png are found in the Executable folder.

Thanks for arranging Zoo 2024 and good luck to both orgas and competitors! <3
